CEA 4 Work-study skills

ECTS credits
19 credits

Presentation

Learning objectives

The "work-study skills" module is designed to train students for a specific mission in a company.

The objective is to become familiar with a particular environment, to acquire the codes, the understanding of the structure's functioning, and to develop innovative solutions that will allow the project to progress.

For semester 8, the objective is to integrate the skills and knowledge acquired during the first three semesters. Semester 8 can be an opportunity for the apprentice to be confronted with new structures, new ways of working, new work organizations via international mobility.

Description of the programme

During this period, the apprentice must meet with the school on a regular basis, in order to keep the school informed of his or her mission and progress.

The important points are :

- The training (basic knowledge, acquisition skills, sense of analysis, sense of synthesis, creativity and level of innovation)

- Work and results (level of quality, quantity, efficiency, achievement of objectives, meeting deadlines, ownership of the subject, mastery of the subject)

- Personality (initiative, sociability, contacts, interests, motivation, sense of responsibility, method and organization, communication, open-mindedness, judgment and realism)

How knowledge is tested
