

Introduction to clinical medicine

In brief

➤ **Course language:** English

Presentation

Learning objectives

- Translating clinical needs into concrete medical devices
 - Understanding the different phases of the development of a medical device
 - Familiarizing students with the medical regulation
 - Developing a foundational understanding of anatomy and physiology
-

Description of the programme

This cycle of seminars is provided by hospital specialists in ophthalmology, orthopedics and pulmonology, and by an engineer working in the design of medical devices. Through specific examples, this course demonstrates the close links that clinicians and engineers must develop to effectively solve the problems posed by complex pathologies that are difficult to understand without considering them as a whole. Each seminar includes an introductory part to acquire anatomical, physiological and clinical knowledge of the specialties presented.

Teaching team

Loïc DAMBRICOURT (loic.dambricourt@ap-hm.fr)

Adeline JANET (adeline.janet@centrale-marseille.fr)

Fares BENMILOUD (faresbenmiloud@hotmail.com)

Marius LEBRET (marius.lebret@airliquide.com)

Total des heures

CM	Master class	24h 16h
TD	Directed work	8h
